

Digital Radiography System

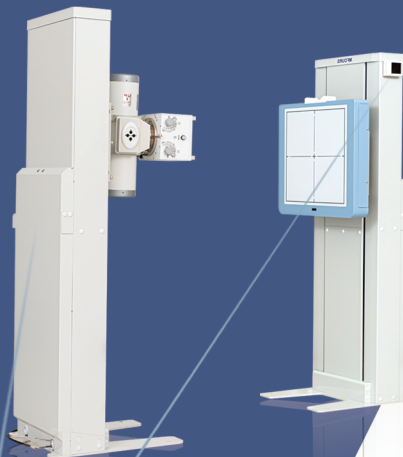

GALAXY & MDXP(MX) Series (Chest Only)

- It is a very compact radiological diagnostic imaging device with a straight arm shape, detector and tube mounted on one stand. SID and up and down movement can be adjusted, making it easy for chest imaging. Its small weight and size eliminates concerns about installation and space constraints. It can also be installed in a vehicle for examination.

**Feature

- ✓ SID 100-180cm adjust
- ✓ Synchronized Stand Up & Down
(Wired and wireless control available)
- ✓ Light & Thin
- ✓ Easy install & Use
(Possible to install examination vehicle)

- It is a compact radiological diagnostic imaging device consisting of two stands. The detector and tube are synchronized and can be moved up and down at the same time, making chest imaging convenient. It can also be installed in a vehicle for examination.

**Feature

- ✓ Synchronized Stand Up & Down
(Wired and wireless control available)
- ✓ Light & Thin
- ✓ Easy install & Use
(Possible to install examination vehicle)
